89 1 27 010

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION IS UNLIMITED

FOREWORD

This directory lists research publications produced by the Naval Environmental Prediction Research Facility (NEPRF) since the command was established in 1971. Abstracts of the last calendar year's publications also are provided.

The following identification information is given:

- (1) Report number assigned by NEPRF;
- (2) Government accession (AD) number where assigned;
- (3) Date of publication;
- (4) The publication's title, author(s), and number of pages

Publications are listed in sequence by type (see key to letter prefixes on first page of listings), report number, and year published.

Requests for copies of individual publications for official use may be directed to:

Commanding Officer
Attn: Technical Library
Naval Environmental Prediction Research Facility
Monterey, CA 93943-5006

While in print, copies of publications will be supplied from stocks on hand. An asterisk (*) by a report's number indicates the publication is out of print and no longer available for distribution from NEPRF.

Registered, qualified users may request copies from:

Director
Defense Technical Information Center (DTIC)
Cameron Station
Alexandria, VA 22314

Others may purchase copies (paper or microfiche) from:

National Technical Information Service (NTIS)
U.S. Department of Commerce
Springfield, VA 22151

Prices are available upon request from NTIS.

(Note: When ordering copies from DTIC or NTIS, cite the Government accession (AD) number where assigned.)

This tenth edition of January 1989 incorporates and supersedes all previous listings/editions.

| Report Number | AD Number | Report Date | Title -- Author(s) -- Pages |
|---------------|-----------|-------------|--|
| TP 1-71 | 739-702 | Dec 1971 | Large-Scale 'Turnover' in the Oceans -- S. Larsen, D. Dale, T. Laevastu -- 36 pp |
| TP 1-72 | 739-364 | Jan 1972 | A Summary of the U.S. Navy Program and FY 1971 Progress in Weather Modification and Control -- Environmental Prediction Research Facility -- 72 pp |
| TP 2-72 | 738-847 | Jan 1972 | The Effects of Oceanic Fronts on Properties of the Atmospheric Boundary Layer -- T. Laevastu, K. Rabe, G. Hamilton -- 54 pp |
| TP 3-72* | 745-759 | Mar 1972 | A Description of the EPRF Hydrodynamical/Numerical Model -- T. Laevastu, K. Rabe -- 58 pp |
| TP 3A-72 | 745-760 | Mar 1972 | Appendices to ENVPREDRSCHFAC Technical Paper No. 3-72 Entitled A Description of the EPRF Hydrodynamical-Numerical Model -- Environmental Prediction Research Facility -- 34 pp |
| TP 4-72 | 746-451 | Jul 1972 | Numerical Modeling of the Growth of Ice Crystals, Graupel, and Hail -- E. Hindman, D. Johnson -- 56 pp |
| TP 5-72 | 746-130 | May 1972 | Geographic and Monthly Variation of Rapid Intensification and Low-Latitude Weakening of Tropical Cyclones of the Western North Pacific Ocean -- S. Brand -- 36 pp |
| TP 6-72 | 746-131 | May 1972 | Changes in the Characteristics of Typhoons Crossing the Philippines -- S. Brand, J. Blelloch -- 38 pp |
| TP 7-72* | 746-880 | Jul 1972 | Speed of Tropical Storms and Typhoons After Recurvature in the Western North Pacific Ocean -- L. Burroughs, S. Brand -- 43 pp |

Listed publications are identified by the following letter prefixes:

| | |
|----------------------------------|------------------------|
| AR -- Applications Report | TN -- Technical Note |
| CPN -- Computer Programming Note | TP -- Technical Paper |
| CR -- (NEPRF) Contractor Report | TR -- Technical Report |
| TM -- Technical Memorandum | |

* Indicates Out of Print

| Report Number | AD Number | Report Date | Title -- Author(s) -- Pages |
|---------------|-----------|-------------|---|
| TP 8-72 | 751-579 | Jun 1972 | The Mean Winds of the Upper Troposphere Over the Central and Eastern Pacific -- J. Sadler -- 29 pp |
| TP 9-72* | 522-652L | Sep 1972 | The Validity of Forecasts of Ballistic Wind and Density for Fleet Ballistic Missile Systems, 1971-1972 Spring, Fall and Winter Case Studies: Eurasia and Eastern Test Range -- D. Schertz, P. Lowe -- 81 pp |
| TP 10-72 | 761-620 | Sep 1972 | A Numerical Study in Optimum Track Ship Routing Climatology -- F. Nagle -- 174 pp |
| TP 11-72* | 524-343L | Dec 1972 | The Effects of Subthermocline Ducts on the Propagation of Sound -- T. Laevastu, P. Wolff -- 50 pp |
| TP 12-72 | 907-418 | Dec 1972 | Monsoon Meteorology, by Colin S. Ramage; A Digest for Africa and Adjoining Indian Ocean Waters -- L. Brody -- 80 pp |
| TP 13-72* | 757-328 | Oct 1972 | A Study of Numerical Simulation of Maritime Fog -- D. Feit -- 46 pp |
| TN 1* | --- | Apr 1972 | Computation of Flushing and Other Pollution Problems in Pearl Harbor with Hydrodynamical-Numerical (HN) Models -- Environmental Prediction Research Facility -- 21 pp |
| TN 2 | 776-231 | Apr 1972 | Coastal Sea-Air Interactions and the Extent of Coastal Influence -- Environmental Prediction Research Facility -- 26 pp |
| TN 3 | 776-226 | Apr 1972 | A Description of Linear and Nonlinear Computational Instability -- D. Haney -- 11 pp |
| TN 4 | 776-227 | Jun 1972 | Estimating Wind Speed Changes at Land/Sea Boundaries -- R. Cormier -- 10 pp |
| TN 5 | 776-228 | Jun 1972 | Visibility Calculations for Microphysical Computer Models -- D. Johnson -- 29 pp |
| TN 6 | 776-229 | Jul 1972 | A Bibliography of Selected Publications on Mediterranean Meteorology -- O. Haney -- 33 pp |

| Report Number | AD Number | Report Date | Title -- Author(s) -- Pages |
|------------------------|-----------|-------------|---|
| CPN 1 | A-011-119 | Jan 1972 | NODCXBT Subroutine for CDC 1604 -- K. Rabe -- 6 pp |
| CPN 2 | A-012-938 | Jan 1972 | NODCBCD Subroutine for CDC 1604 -- K. Rabe -- 5 pp |
| CPN 3 | A-011-409 | Jan 1972 | Basic Zoom Program - Extraction of a Portion of Hemispheric Analyses and Interpolation to a New Grid of Desired Size, Location, and Orientation -- G. Wiese -- 32 pp |
| CPN 4 | A-011-410 | Sep 1972 | STATPROG Subroutines for CDC 1604 -- C. Simpson -- 22 pp |
| TR B2-0272-001 (CSU) * | 741-717 | Feb 1972 | Diagnostic Study of the Planetary Boundary over the Oceans -- W. Gray (Colorado State University) -- 99 pp |
| TR S1-0972-002 (SRI) | 757-814 | Sep 1972 | Further Development of Objective Methods for Registering Landmarks and Determining Cloud Motions from Satellite Data -- D. Wolf, R. Endlich, D. Hall (Stanford Research Institute) -- 82 pp |
| TP 1-73 | 758-007 | Jan 1973 | The 1972 Typhoon Analog Program (TYFOON-72) J. Jarrell, R. Wagoner -- 44 pp |
| TP 2-73 | 764-859 | Mar 1973 | Tropical Cyclones of the North Indian Ocean -- J. Sadler, R. Gidley -- 62 pp |
| TP 3-73 | 766-797 | Mar 1973 | The Low-Level Structure of Weak Tropical Waves - A Preliminary Report -- R. Fett, R. Nagle, W. Mitchell -- 26 pp |
| TP 4-73 | 767-031 | Jun 1973 | The Typhoons of October 1970 in the South China Sea: Intensification, Decay and Ocean Interaction -- C. Ramage -- 49 pp |
| TP 5-73 | 767-030 | Jun 1973 | State of the Sea Around Tropical Cyclones in the Western North Pacific Ocean -- S. Brand, J. Blelloch, D. Schertz -- 32 pp |
| TP 6-73 | 767-934 | Sep 1973 | Oceanic Fog--A Numerical Study -- E. Barker -- 74 pp |
| TP 7-73* | 771-379 | Sep 1973 | Handbook for Forecasters in the Bay of Bengal -- M. Cuming -- 170 pp |

| Report Number | AD Number | Report Date | Title -- Author(s) -- Pages |
|---------------|-----------|-------------|---|
| TP 8-73 | 769-538 | Oct 1973 | Changes in the Characteristics of Typhoons Crossing the Island of Taiwan -- S. Brand, J. Bluelloch -- 21 pp |
| TP 9-73 | 776-232 | Dec 1973 | The Evaluation of Hong Kong Harbor as a Typhoon Haven -- D. Mautner, S. Brand -- 130 pp |
| TP 10-73 | 775-616 | Dec 1973 | Potential Cumulus Rainfall Modification -- Panama Canal Zone -- P. Lowe -- 18 pp |
| TN 7 | 772-085 | Sep 1973 | Computation of Tidal Currents in the Vicinity of S. Stefano Island -- K. Rabe -- 24 pp |
| TN 8 | 772-093 | Nov 1973 | Coastal Sea-Air Interactions and the Extent of Coastal Influence -- T. Laevastu -- 32 pp |
| TN 9 | 772-094 | Nov 1973 | A Model of Circulation and Dispersion in Pearl Harbor -- S. Larson -- 32 pp |
| CPN 5 | A-011-411 | Jan 1973 | Mediterranean Sea-Surface Temperature Analysis Program - MEDSST -- A. Anderson, S. Larson, L. I'Anson -- 121 pp |
| CPN 6 | A-011-412 | Jan 1973 | Program BTREPORT -- A. Anderson, S. Larson -- 80 pp |
| CPN 7 | A-011-413 | Feb 1973 | Mediterranean Mixed Layer Depth Analysis Program - MEDMLD -- A. Anderson -- 62 pp |
| CPN 8 | A-011-414 | Feb 1973 | The WAVE32 Program -- S. Larson, A. Anderson -- 59 pp |
| CPN 9 | A-011-415 | Feb 1973 | The MLDZOOM Program -- S. Larson, A. Anderson -- 34 pp |
| CPN 10 | A-035-170 | Jul 1973 | Ocean Climatology Extraction and Adjustment Program for the Mediterranean Program SOVEL -- T. Laevastu -- 22 pp |
| CPN 11 | A-011-416 | Nov 1973 | Program GRAPHIC -- C. Simpson, D. Johnson -- 36 pp |
| CPN 12 | A-011-417 | Dec 1973 | Subroutine SKEWTLF -- J. Ficke -- 12 pp |

ABSTRACTS OF 1988 PUBLICATIONS

Naval Environmental Prediction Research Facility
Monterey, CA 93943-5006

TR 88-01, January 1988: The Effects of Better Environmental Inputs in Estimating Sea Clutter -- T. Cheung -- 27 pp.

Microwave radars deployed near the marine environment, e.g., shipboard and airborne radars, are subjected to sea return or sea clutter. In many instances, sea return for radars at large angles of incidence or small grazing angles (less than 15°) is of special importance.

This study examines the effects of better environmental inputs to an existing sea clutter model that has proven to be adequate for small grazing angles. Limitations in the existing model are described, improvements are suggested, and plans for improving the model are outlined and discussed.

TR 88-02, February 1988: An Evaluation of Two Millimeter Wave Propagation Models for Horizontal Atmospheric Attenuation at 70-115 GHz -- G. Vogel -- 82 pp.

An evaluation is performed for two millimeter wave propagation models: the LIEBE model, developed at the Institute for Telecommunications, Boulder, CO, under the guidance of Dr. H. Liebe; and the EOSAEL model, developed at the US Army Atmospheric Laboratory at White Sands Missile Range, NM. This evaluation is conducted for horizontal attenuation due to both clear atmosphere and hydrometeor effects under typical surface meteorological conditions, and within the frequency range 70-115 GHz. Intercomparisons of model theories and predictions show slight differences for molecular oxygen and fog attenuations, but significant differences for water vapor and rain attenuations. Results indicate that while the qualitative agreement between either the EOSAEL or LIEBE model predictions and measurements for horizontal attenuation due to oxygen, water vapor, fog and rain is certainly satisfactory, there is a definite need for improvement. Overall, no clear preference for either the EOSAEL or LIEBE model for operational use is ascertained. Data comparisons suggest that, for several attenuation types, model preference is dependent on either the frequency or meteorological conditions.

TR 88-03, April 1988: Comparison of Electro-Optical Ranges as Calculated from Model-Derived and Observed Data -- C. Sampson -- 37 pp. (Distribution authorized to U.S. Government agencies and their contractors only; see listing on p. 33.)

(Abstract: same distribution as report)

TR 88-04, April 1988: Parameterization of Horizontal Wind Velocity Variability -- T. Dowding -- 128 pp

Longitudinal and transverse horizontal wind velocity variability is parameterized based on data collected for the Bureau of Land Management (BLM) between 1980 and 1982. The BLM data sets were used to derive horizontal wind velocity components and standard deviations of these components in the longitudinal (downwind; u, σ_u) and transverse (crosswind; v, σ_v) directions for various time averages. The standard deviations were plotted versus wind speed so that trends in the change of values could be determined. A methodology was used to develop a theoretical algorithm to account for turbulence production mechanisms due to shear, buoyancy and mesoscale processes. Empirical fits were determined for both the u and v wind directions over four different time averages. The results were related to puff growth in the x, y directions and form the basis for improving a puff dispersion model for near-coast overwater regions.

TR 88-05, August 1988: Meteorological Measurements During the Western Mediterranean Circulation Experiment - June 1986 -- J. Haggerty, R. Picard, R. Fett -- 236 pp.

An experiment to collect meteorological and atmospheric aerosol data in the western portion of the Mediterranean Sea is described. Measurements were taken on three cruises during May and June 1986. Experimental procedures are explained, atmospheric conditions during the cruises are reviewed, and meteorological data from each cruise are provided.

TR 88-06 through -09: Severe Weather Guide, Mediterranean Ports -- four additional port studies publications in the series to date, as follows:

22. Venice -- 57 pp (TR 88-06)
23. Trieste -- 54 pp (TR 88-07)
24. Cartagena -- 60 pp (TR 88-08)
25. Valencia -- 60 pp (TR 88-09)

(See Common Abstract, next page)

Common Abstract:

This handbook for the port of (name of port), one in a series of severe weather guides for Mediterranean ports, provides decision-making guidance for ship captains whose vessels are threatened by actual or forecast strong winds, high seas, restricted visibility or thunderstorms in the port vicinity. Causes and effects of such hazardous conditions are discussed. Precautionary or evasive actions are suggested for various vessel situations. The handbook is organized in four sections for ready reference: general guidance on handbook content and use; a quick-look captain's summary; a more detailed review of general information on environmental conditions; and an appendix that provides oceanographic information.

TR 88-10, November 1988: Climatology of North Pacific Tropical Cyclone Tracks -- R. Miller, T. Tsui, A. Schrader -- 514 pp.

This climatology depicts and provides statistics on the tracks of tropical cyclones that have occurred in the North Pacific Ocean during the years 1945-87. The data are summarized in four types of charts -- mean paths, actual tracks, constancy and relative frequency, and speed of movement -- for both the western and eastern North Pacific regions, in 24 half-monthly calendar periods.

TR 88-11, November 1988: Icing Considerations for HALE (High Altitude, Long Endurance) Aircraft -- G. Vogel -- 55 pp.

Although a low probability event, ice accretion does present a major obstacle to safe aircraft operations. In this report, the character of the aircraft icing environment is explored in terms of key meteorological and aerodynamic factors as related to the HALE (High Altitude, Long Endurance) aircraft. The distribution of icing in the atmosphere, mainly a function of temperature and cloud structure, is presented. Ice forecasting techniques and icing instrumentation are discussed as viable approaches for minimizing potential aircraft icing hazards. It is concluded that an onboard ice accumulation detector in combination with ground-based remote sensing instrumentation would provide the best capability for the detection and monitoring of icing conditions. The use of an automated icing forecasting program, which is both effort- and time-efficient, is recommended.

CR 88-01, March 1988: Passive Microwave Measurements of Water Vapor Fields and Rain for Locating Fronts in Cyclonic Storms -- K. Katsaros, I. Bhatti, L. McMurdie, G. Petty -- 50 pp.

This report describes some basic research techniques and algorithms developed to diagnose fronts in cyclonic storms over the ocean with passive microwave data. The need for this research stems from the limited availability of reliable weather reports over the ocean, and the occasional disruption of weather map transmissions.

In earlier work we found that strong gradients in integrated atmospheric water vapor are good indicators of surface locations of fronts in midlatitude cyclones over the oceans. A second significant indicator of frontal activity is precipitation. Therefore, we have developed methods for flagging strong gradients in integrated atmospheric water vapor (WVG-flag) and the presence of rain by using data from the Scanning Multi-channel Microwave Radiometer (SMMR) aboard polar-orbiting Seasat and Nimbus-7 satellites. The data were not received in real time, but were analyzed from archived tapes. Examination of 65 frontal systems showed the water vapor gradient flag to catch 86% of the fronts while the precipitation flagged 90%. Each flag emphasizes different portions of the cyclone and are therefore complimentary.

Ultimately these techniques are intended for operational use with data from the Special Sensor Microwave Imager (SSM/I) which was launched in June 1987 on a satellite in the Defense Meteorological Satellite Program (DMSP). Such data can be received in real time directly by ships at sea.

CR 88-02, March 1988: Forecasting Aids for Setting Tropical Cyclone Conditions: Sasebo and Iwakuni, Japan -- J. Jarrell -- 46 pp.

Forecast aids for predicting winds associated with tropical cyclones at Sasebo and Iwakuni, Japan, are developed. This report is divided into two parts: the first contains charts that relate winds observed at Sasebo and Iwakuni to tropical cyclone center winds as a function of storm location; and the second provides diagrams that estimate the worst case arrival time of winds of at least 50 kt.

CR 88-03, April 1988: Aerosol Characteristics in the Marine Boundary Layer over the Straits of Gibraltar - June 1986 -- B. Wattle, C. Rogers -- 88 pp.

Measurements of aerosol characteristics in the marine boundary layer were taken during a two-week cruise through the Straits of Gibraltar. Observations of Aitken nuclei concentration, aerosol size spectra (0.01-100 μ m diameter), aerosol composition, visibility (scattering coefficient), optical depth (sun photometry), temperature, humidity, winds and cloud cover were acquired during daylight hours. The data show that surface visibility fluctuations correlate well with particle concentration in the 0.56-1.78 μ m size range. Surface relative humidity and particle composition appear to be the factors that control concentration in this size range.

These data will be used as ground truth for techniques which retrieve aerosol data from satellites. This experiment was well suited for such an application, since there was little cloud cover to obscure satellite measurements; and comprehensive, consistent aerosol measurements were successfully taken.

CR 88-04 through -09: Severe Weather Guide, Mediterranean Ports -- six additional port studies publications in the series to date, as follows:

16. Barcelona -- 74 pp (CR 88-04)
17. Palma, Mallorca -- 63 pp (CR 88-05)
18. Ibiza -- 71 pp (CR 88-06)
19. Polensa Bay -- 72 pp (CR 88-07)
20. Livorno -- 73 pp (CR 88-08)
21. La Spezia -- 61 pp (CR 88-09)

Common Abstract:

This handbook for the port of (port name), one in a series of severe weather guides for Mediterranean ports, provides decision-making guidance for ship captains whose vessels are threatened by actual or forecast strong winds, high seas, restricted visibility or thunderstorms in the port vicinity. Causes and effects of such hazardous conditions are discussed. Precautionary or evasive actions are suggested for various vessel situations. The handbook is organized in four sections for ready reference: general guidance on handbook content and use; a quick-look captain's summary; a more detailed review of general information on environmental conditions; and an appendix that provides oceanographic information.

CR 88-10, June 1988: NOAA AVHRR Observations During the Marginal Ice Zone Experiment, Between Spitzbergen and Greenland, June 7 to July 18, 1984 -- O. Skagseth, K. Kloster, K. Barthel, O. Johannessen -- 137 pp.

The marginal ice zone (MIZ) is the region in which the polar air, ice and water masses interact with the temperate air and ocean masses. During MIZEX-84 an intensive effort was made to obtain an integrated data set including meteorology, oceanography and glaciology, using remote sensing as well as conventional in situ observation methods, in the MIZ between Spitzbergen and Greenland from 7 June to 18 July 1984.

This report gives NOAA AVHRR (Advanced Very High Resolution Radiometer) satellite imagery near-visual and infrared overviews of the Fram Strait and the large-scale surrounding area. For near-visual imagery phenomena of particular interest, e.g., mesoscale vortices, the focus of attention is on off- and on-ice air circulation, island lee effects and synoptic low development. Features of special interest are noted, and important small scale phenomena are enlarged if they are not prominent on the overview images.

An appendix provides satellite images and surface charts showing day to day development over the MIZEX-84 area 7 June-18 July.

CR 88-11, June 1988: Forecasters Handbook for Japan and Adjacent Sea Areas -- R. Englebretson, R. Gilmore -- 659 pp.
(Distribution authorized to U.S. Government agencies and their contractors only; see listing on p. 34.)

(Abstract: same distribution as report)

CR 88-12, August 1988: Program Performance Specification for North Atlantic Fog Forecasting -- C. Rogers -- 29 pp.

A program performance specification (PPS) for forecasting fog in the North Atlantic Ocean is described. The forecasting procedure is based primarily on three inputs: whether there is heating/cooling of the air by the underlying ocean surface; the initial weather conditions and clouds in the boundary layer; and the character of any low-level inversion. This PPS is developed from 68 case studies that utilized weather station ship data from the North Atlantic; because fog in the region is almost exclusively a summertime phenomenon, this study is based on data from the summer season. The purpose of this PPS is to provide additional input for an expert system being developed to forecast maritime obscurations.
